

MS Teams and Kuando Busylight

SMS/Text extension

The SMS/Text extension is controlled by a set of registry entries.

The path is HKCU\Software\Busylight\SMSTextMessage

The following table contains all registry keys, which are used by Busylight, along with the default values if the key does not exist:

Registry Key	Data type	Description	Default Value (Decimal)
Command	SZ	The Busylight command to execute. Valid settings are: Alert Light Blink Pulse ColorWithFlash	Alert
Blue	DWORD	Blue value	0
Green	DWORD	Green value	69
Red	DWORD	Red value	255
SoundClip	DWORD	Index of ringtone for calls (1...8)	5
Volume	DWORD	Volume of ringtone for calls	75

There is logging built into the Busylight software. The messages are going to the Windows Debug channel. Here is a small instruction for it:

To make a debug log follow these steps:

1. Download DebugView <https://technet.microsoft.com/en-au/sysinternals/bb896647.aspx>
2. Close Busylight software
3. Start DebugView
4. Start Busylight
5. Reproduce the issue
6. Close Busylight again
7. Save the log file, and email it to support@plenom.com
